

## Lab science

- do a small experiment at home making a hypothesis of what will happen. (make sure it is safe and your parents give you permission to use whatever materials you need to use. Identify your variable and form a conclusion.)
- Watch a documentary about something science related
- Comment on google classroom conversation feed to add to a debate or discussion.
- Go outside and take a photograph of something and explain the science behind it or ask questions on what you don't know behind the science of it.
- Play one of the challenge Kahoots on google classroom I will post.
- Research coronavirus and find out what you can about the science behind it.

## Earth Science

- go outside and find a rock, see if you can identify any minerals that we have looked at over the last few weeks or at least how many different minerals might be in it.
- do a small experiment at home making a hypothesis of what will happen. (make sure it is safe and your parents give you permission to use whatever materials you need to use. Identify your variable and form a conclusion.)
- Watch a documentary about something science related
- Comment on google classroom conversation feed to add to a debate or discussion.
- Go outside and take a photograph of something and explain the science behind it or ask questions on what you don't know behind the science of it.
- Play one of the challenge Kahoots on google classroom I will post.
- Research coronavirus and find out what you can about the science behind it.

## Physics

- work on ohm's law practice problems.
- draw a circuit and label the parts you put in it. Make your own practice problems related to ohms law that you think will stump me.
- do a small experiment at home making a hypothesis of what will happen. (make sure it is safe and your parents give you permission to use whatever materials you need to use. Identify your variable and form a conclusion.)
- Watch a documentary about something science related
